

## Composite restorations

Composite restorations are tooth-coloured filling materials which can produce a natural looking restoration with minimal preparations to the teeth.

### Posterior composites

Composites can be used to restore small to medium sized cavities in the posterior teeth. The two examples illustrate the replacement of unsightly amalgam 'silver' fillings with tooth-coloured composite restorations.

# Composite restorations

## Anterior composites

### Case 1

This young man in his mid-twenties was unhappy with the appearance of his lower anterior teeth.

The old discoloured restorations were removed and replaced with aesthetic composite restorations giving a more pleasing result.

### Case 2

This young lady presented with three severely broken down anterior teeth. The teeth were restored in one visit with adhesive composite restorations to give an aesthetically pleasing outcome.

### Case 3

This young man had an unaesthetic upper anterior tooth which had an old failing restoration. The tooth was restored with a composite restoration to mimic the adjacent central incisor.

If you would like any further information about our composite restorations, please call us on **01282 423973** where a member of our team will be happy to talk to you.
